As três leis da robótica criadas por Asimov são:

1. **Um robô não pode ferir um humano ou permitir que um humano sofra algum mal**
2. **Os robôs devem obedecer às ordens dos humanos, exceto nos casos em que essas ordens entrem em conflito com a primeira lei**
3. **Um robô deve proteger sua própria existência, desde que não entre em conflito com as leis anteriores.**

First Apparition	Billion Dollar Brain (1967)
Reality	Movie Fiction / The Computer Exists

Virtually since the day the first computers were announced, film-makers have been warning us that one day they'd be our undoing. From Hal 9000 (*2001: A Space Odyssey* (1968)) to WOPR (*WarGames* (1983)), from SkyNet (*The Terminator* (1984)) to the supercomputers of *The Billion Dollar Brain* (1967) and *Tron* (1982) and the virtual realities of *Welt Am Draht* (1973), *The Matrix* (1999) and *eXistenZ* (1999), electronic brains have been constantly watching their creators with jealousy, biding their time before attempting – sometimes with success – to wrest control away from we puny humans. One of the most impressive of these cybernetic usurpers was Colossus, the erstwhile defence computer with designs on global domination in Joseph Sargent's masterly *Colossus: The Forbin Project* (1970) (sometimes simply known as *The Forbin Project*).
